**TYHEE DISCOVERS NEW GOLD ZONE AT GOODWIN LAKE, WITH THE RESULTS FROM FIRST FOUR DRILLHOLES RETURNING UP TO 14.458 GPT GOLD OVER 2.7 METRES WITHIN 6.422 GPT OVER 6.6 METRES.**

VANCOUVER, British Columbia (March 6, 2008) -- Tyhee Development Corp. (TSX Venture, TDC) (the "Company") reports the results of the initial four drillholes on the Company's wholly-owned Goodwin Lake Property.

Tyhee is pleased to report that all four drillholes returned significant gold values, including 6.422 grams of gold per tonne (gpt) over 6.6 metres (m) in diamond drillhole GL003, including 14.458 gpt gold over 2.7 m, and 11.435 gpt over 1.5 m in diamond drillhole GL002. Broader zones, up to 0.625 gpt gold over 34.9 m (GL001) were encountered.

Dr. D.R. Webb, President & CEO reports "We are very pleased that the first diamond drillholes ever completed on the VAD Zone have returned such robust results. The geology was determined to be prospective, and preliminary work identified substantial zones of gold enrichment that returned very encouraging results. We feel we may have identified a new centre of mineralization that has never before been recognized" Tyhee has been consolidating properties in the Yellowknife Gold Belt, and has focused on internally generated prospects with significant gold potential. The results suggest the potential exists for a large tonnage Ormsby-style deposit in that the gold is hosted by a silicified, sulphidized and brecciated mafic body. The VAD Zone is 12 kilometres south of the Company's development-stage Yellowknife Gold Project.

## **About Tyhee Development Corp.**

Tyhee Development Corp. is a gold exploration and development company currently focused on the historic Yellowknife Gold Camp, NWT, Canada. It is the largest property holder in the historic camp, and has the largest exploration and development program underway in the region. Its principal asset is the advanced-stage Yellowknife Gold Project, which consists of 6,625 hectares (15,481 acres) of mining leases located 90 km (56 miles) north of Yellowknife, NWT, Canada. Additional gold properties have been acquired within the Yellowknife Gold Belt and exploration of these targets has commenced with the initial results confirming significant gold values over multiple metres on two of the three grassroots properties reported. Results from the third property are pending.

Tyhee completed fire assays on drill core samples using 30 gram aliquots with ICP-ES finish for gold analyses, prepared at Acme Analytical Laboratories Ltd. in Yellowknife, and finished at Acme Analytical Laboratories Ltd in Vancouver. A semi-quantitative multi-element analysis is run on 0.5 gm aliquot samples leached in a hot aqua regia solution and measured using ICP-ES techniques. Tyhee conducts a rigorous QA/QC program of inserting blanks and duplicates in the field and standards in the laboratory. The laboratory also conducted their own independent QA/QC program including inserting their own standards and rerunning samples from pulped material and reject material. These results were provided to Tyhee. All standards, duplicates, blanks and check assays returned acceptable results. Mr. V. Pratico, P.Geol., the designated QP within the meaning of NI 43-101, has reviewed this release and approves of its content.
